Science Vision and Principles

Asking questions | Making predictions | Setting up tests | Observing and measuring | Recording data | Interpreting and communicating results | Evaluating

At Elweden Primary Academy, we shine as enthusiastic and successful scientists when...

...we are doing hands-on, practical activities **so that** we can work like real scientists - testing ideas and learning by doing.

...we can connect our learning to real life, **so that** we can see how science helps us and the world around us.

...we use science words to explain our thinking, **so that** we can share our ideas clearly and understand more.

...our classroom is full of curiosity and questions, **so that** we feel confident exploring, wondering and discovering new things.

...our learning is broken down into small, easy steps, **so that** everyone can understand new ideas and build on what we already know.
